Personalized health care delivered right to you

Easy, convenient and personal, video visits bring your doctor and the unique care you need *to you* – wherever you may be.

Just like an office visit, your doctor will listen to your health concerns and symptoms, ask questions to understand your medical history and work with you to create a tailored treatment plan, when needed. Video visits are billed the same as in-person visits.

Now is always the time to take care of yourself. Don't wait. Easy access to quality health care is at your fingertips.

What can be treated with a primary care video visit?

Whether you're managing a chronic condition or think you have a nagging concern, we can help with a wide range of care needs, including:

Allergies

Aches, sprains and strains

Chronic conditions such as diabetes, high blood pressure and high cholesterol

Ear infections

Eye infections

Mental health concerns such as anxiety and depression

Skin conditions such as rashes, hives or bug bites

And depending on your health care needs, your doctor may recommend a combination of in-clinic, video or phone visits as part of your ongoing care or treatment plan.

[call your clinic](#)

How do you get started with online primary care visits? It's as easy as 1-2-3.

- 1) [Make an appointment online](#) at a time and on a date that works for you. You can also [call your local clinic](#) to set it up.
- 2) Before your visit, download [Google Duo](#), which is a free, simple, encrypted and high quality video app that works on computers and smart mobile devices. This is how you and your doctor will see each other face-to-face and work out a plan.
- 3) [Fill out this consent](#) (PDF) and have it ready when your doctor calls you to start your appointment. This gives us the ability to use your information to coordinate care, treatment and more.

That's it! Your doctor will call you through Google Duo when your appointment time arrives.
